

# Call for Proposals

## *Palgrave Studies in Indigenous Psychology*

The book series publishes books that make significant contributions to scholarship:

- By asking important questions about the discipline, profession, and practice of psychology;
- By exploring knowledge production outside of the mainstream;
- By critical appraisal of cultural assumptions and theoretical frameworks;
- By shedding light on the dialectics of the universal and the particular in human subjectivity;
- By going beyond Western psychology in researching the ontological, epistemological, ethical, spiritual, and aesthetic dimensions of the mental life;
- By addressing issues of structural oppression in the globalizing era;
- By exploring possibilities for a more equitable global psychology.

Given the interdisciplinary nature of indigenous psychology, this book series welcomes contributions from all disciplines in the social sciences and the humanities.

**ABOUT THE IMAGE:** Cartography entails projecting a three-dimensional object (earth) onto a two-dimensional space. The well-known Mercator projection (1569) over-represents the amount of land that Europe and the North occupy and misrepresents the extents of the South. Thus, for this Indigenous Psychology series, we have chosen the Hobo-Dyer map projection that is true to area. It symbolizes our commitment to do justice to the global geography of knowledge in psychology, without privileging North American or European frameworks of the mental life.
